

Day 1:

To create a new window  
Right click on ~~some~~

↓  
go to add.

↓  
new item.

↓  
Window (WPF) (Name: Login)

↓  
Add. → new window will be  
Created

Horizontal Alignment = "center"

↓  
make the TextBlock  
center.

To change the starting window

"go to APP.XMI and change the  
Start up uri = Login.xaml"

password Box

↓  
used for password.

password Char = "\*" ;

↓  
we can change the  
Char. eg:- \* \* \* \*

messageBox.Show ( ) ;

↓  
show dialog

messageBoxText, caption,  
button, icon

!= → not equal

= → equal.

```
if ( ) {  
    if ( )  
    {  
    }  
}
```

→ nested if

~~and~~ = and operator

↓  
used ~~when~~ when both conditions are true.

|| = or operator

↓  
used when ~~at least~~ at least one condition is true.

if (string.isnull or empty (true))

↓  
string function to check  
the given string is empty or  
not. → if it empty it will

be true.

if (string.isnull or whitespace())

↓  
not equal
