Day 35   04/04/2025.

String a = "Hello"

char[] arr = a. TocharArray();
                        ↳
              Convert String to
              CharArray.

Array arr. reverse (arr);
              ↓
        reverse the array.

   eg:-
           1, 2, 3
           3, 2, 1

String newString = new String(arr);
                        ↳
                  convert to String.

try   will try the code. if
 {   ———>   the code throw error mean
 }   it will go the catch
 3
catch
 {

```
String a = "1";
int num = int.parse(a);
```

convert string value to other data type.

here we mention the datatype.

we should mention correct data type.

It will only convert the value if the value in int (or) it will throw error.
