Disconnect approach.

Dataset

```
{
SQL Connection . con = new SQL Connection
( )
Connection . Open ()
String sql = " select * from contry "};
SQL Command cd = new SQL comand
( sql , con );
     ↳ (getting table from SQL database)
0 . SQL Data-Aadapter sq data =
new SQL DataAdapter (cd);
dataset st = new Dataset (       )
sQdata . Fill (st , "contry")
                            ↓
                         anyname
                         for table
           ↓
        Temp table
```

CmbCouty . display memberpath = {Binding country}
Name

CmbConty . Select value path = {Binding contry
id}

CmbCounty . Itemsource = dataset. tables
["County"] -
defaultview .

Selection changed = [ ]
contruy -> state -> city.

If (cmbconty . selectivalue path != null

select * from state where
~~databases~~ conutyryid =
@ countyid .

Addwithuale (@contyid , CmbCounty .
seletvalue)
