Dock panel
Left Frame → Top
                 → right
                 → main
         ↓
      Buttom.

object of Home.

Home ohome = New Home();

ohome. show();  → To show the
                   Home screen

this . close();  → To close current
                   screen

To add delete page:-

Add → New item → Page (WPF)

< Frame >
      ↓
  x: Frame.me . Jchecking ch=new Checking
                                    ↓
Public button() {               Page
  Frame.me . content = Checking . Page
                                    ↓
}                                 Page

manage like stack like reset, next

```
    Frame. GoBack ( )
    Frame. GoForword ( ).

    it (Frame . cangoBack) {
    it (Frame . can go Froud') {

    used to not go out
        of boundry .
```

< dockpanel > ->main panel .

```
    DockPanel . DOCK = "right";
    Dockpanel . DOCK = "left";
    DOCKPanel . DOCK = "TOP";
    DockPanel . DOCK = "buttom";

) Frame . will come in center.
```
