

```
Public List <Registermodel> listner {get;set}
```

```
Listner = new ProxyModel List < Register model > ();  
listner . Add ( regmodel )
```

```
Public void
```

```
if ( listner != null )
```

```
{  
    listner . Add ( regmodel );
```

Listview

```
↳ ItemSource = { Binding listner }
```

```
ObservableCollection < Register model >
```

↳ same as list but it automatically notify

Reg #1 / new RegisterModel

Listner.Add

(new RegisterModel

{ Name = "Hello", Age = 23,
salary = 1000 };

Listner.Add (new RegisterModel

{ Name = regModel.name,
age = regModel.age,
salary = regModel.salary });
