

Day 74

29/05/2025

using $\Rightarrow$ Automatic garbage collection.

```
using (.....)
{
    access object within
    the scope.
}
```

will delete least
used object.
it can be 3 or
5

```
using (SqlHelper sqlHelper = new SqlHelper())
```

```
{
```

```
}
```

SqlHelper

```
public class SqlHelper : IDisposable
{
    public void Dispose()
    {

```

Destructor → called when a object is disposed

↓
✓
- > Helper()

```
{  
    dispose();  
}
```

→ nothing everything written here

Constructor → called when a object is created.

Value Converter

RadioButton.

isChecked = { Binding - }

```
public class YesNoValueConverter : ValueConverter  
{  
    public object Convert (object value,  
        { value.ToString().ToLower() == "yes"  
        if (value is null)  
            return false.  
}
```

xmins : context :

datacontext

key:-

ischecked = {Binding : employee,
converter = {state resource keyname}}

Public convert Boolean.

if (value is bool boolean)

{

return boolean ? "yes" : "no";

}

return "no";
