

Day 98

05/06/2025

web application

* A web application is a application software that is created with web technologies and run via a web browser.

dynamic webpage

* a webpage that includes content that is updated regularly.
* website contains information that changes depending on the viewer, the time of day, the time zone or the viewer's language.

Static webpage

* a static website contains web pages with fixed content.

DNS

DNS - Domain Name System

↳ turns domain names into IP addresses, which allow browsers to get websites and other internet resources.

(or)

DNS servers convert URLs and domain names into IP addresses that computers can understand and use.

web server

* a computer that stores web server software and website's component files (for example HTML images, CSS, JavaScript files)

* A web server connects to the Internet and supports physical data interchange with other devices connected to the web.

name server

* If we type escape.com into google, the nameserver tells the browser where that domain is located.

HTTP

* HTTP messages are plaintext which unauthorized parties can easily read. And they can read them over the Internet.

HTTPS

* HTTPS transmits all data in encrypted form.

* HTTPS uses TLS (SSL) to encrypt normal HTTP requests and responses and to digitally sign those requests and responses.

SSL → Secure sockets layers
↓
encrypts data sent between website and browser.

Client side code

- * Runs in user's web browser
- * HTML, CSS, JavaScript
- * stored in temp folders.

server side code

- * runs in web server.

- * languages like java, C#, PHP,
Node.JS
